

**Do you have suspension problems?**

**Our vehicle's suspension system (i.e., shocks or struts) is something we often take for granted. However, after supporting several tons of metal year after year, eventually the shocks will wear out and suspension repair **will be necessary**. Some people mistakenly believe the suspension is mainly about having a smooth ride, and therefore these repairs aren't as important as other maintenance issues like oil changes or brakes. However, having a bad suspension can greatly affect your ability to control the vehicle, especially when stopping or turning, so it's in your best interest not to ignore this part of auto maintenance.**
